

# The Wiley Encyclopedia of Personality and Individual Differences

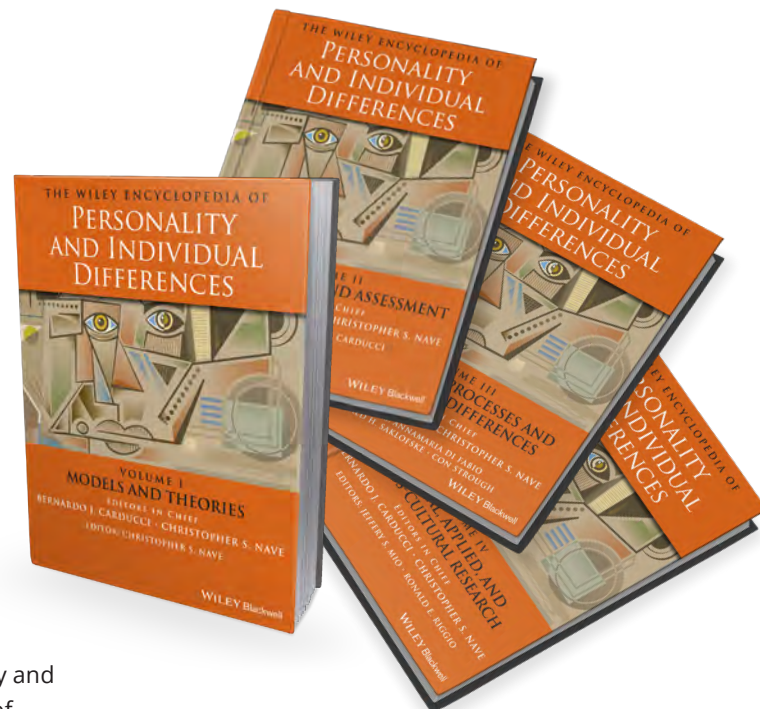

## Editors-in-Chief:

Bernardo J. Carducci & Christopher S. Nave

*The Wiley Encyclopedia of Personality and Individual Differences* (EPID) is organized into four volumes that look at the many likenesses and differences between individuals. Each of these four volumes focuses on a major content area in the study of personality psychology and individuals' differences. The first volume, *Models and Theories*, surveys the significant classic and contemporary viewpoints, perspectives, models, and theoretical approaches to the study of personality and individuals' differences (PID). The second volume *Measurement and Assessment* examines key classic and modern methods and techniques of assessment in the study of PID. Volume III, *Personality Processes and Individuals Differences*, covers the important traditional and current dimensions, constructs, and traits in the study of PID. The final volume discusses three major categories: clinical contributions, applied research, and cross-cultural considerations, and touches on topics such as culture and identity, multicultural identities, cross-cultural examinations of trait structures and personality processes, and more.

- Each volume contains approximately 100 entries on personality and individual differences written by a diverse international panel of leading psychologists
- Covers significant classic and contemporary personality psychology models and theories, measurement and assessment techniques, personality processes and individual differences, and research
- Provides a comprehensive and in-depth overview of the field of personality psychology

*The Wiley Encyclopedia of Personality and Individual Differences* is an important resource for all psychology students and professionals engaging in the study and research of personality.
